My step by step instructions for installing Revit. There are a few installation methods for Revit. In this article we will be using the shortcut installer which is located in the start menu. Click on the Revit Installation shortcut to install the software. (This shortcut does not have to be on your desktop) You will need to accept the Terms and Conditions of your installation. Click to accept the terms and conditions of the installation. Select your installation location. This can be a hard drive partition or a directory on your network. Select your default user. (You will need your account information to perform the installation) Install the user registration components. The installer will ask you to confirm that you would like to continue. Click to continue. Accept the default system locations that are offered to you. This will include: Documents, Settings, and ProgramData. Check the box that says, "Create a desktop icon for Revit 2013 for opening the application". Click the Finish button to start the installation. Follow the prompts on the Revit installation wizard. Click on the Revit icon to open the program. Once the installation is complete, you will be prompted to reinstall the user registration components. Try to load the Autodesk Revit 2016 for Architecture help file. This is helpful for some initial setup information. In the Revit 2015 tab, select the Factory Defaults from the Default settings drop down menu. On the Default tab, select None from the Base Options section of the Geometry & Drafting tab. In the Material Settings tab, check the Use Transparency checkbox on the Materials tab. In the Specification and Settings tab, set the default settings to No and Confirm, respectively. Uncheck the Create new sheets and sheets from the current selection in the default settings, and the default settings checkboxes. Set the Automatic synchronization checkbox to

Off. In the Component Dependencies tab, select Show model icon on the Sheet tabs. The default setting for the Auto-Show Model icon on the Sheet tabs is On. In the Casing tab, set the default settings to No. In the Advanced tab, select No from the Autodesk Revit 2016 for Architecture for the solution. You will need to click OK to return to the Revit program. You will now need to configure and 82157476af
